

# Everything you need for field working, in one place

## The tool for business field work

AppCan is a configurable app, which you can install on your field agents' iPhones and iPads. It gives you the power and flexibility you need in fieldwork software, without the expensive development costs. And it's all wrapped up in the convenience of a mobile app.

### Tailor your field data collection to your business

Using AppCan's web interface, you create data collection 'mini-apps', tailor made for your business. Your employees can then utilise AppCan to use these mini-apps on their iPhones or iPads, easily collecting the data your business needs in the format you prefer.

### Access important documentation - in the field

When your employees are in the field, they may need access to technical schematics, product sheets, manuals or other important information. Rather than carry hard copies or have to search online, you can give them exactly what they need by pushing the relevant documents to their iPad or iPhone using AppCan.

Users can even search for titles or keywords to quickly find just what they need to know, keep track of unread documents, and allocate documents as 'favourites' for even quicker access.

### Stay up-to-date

When people are working in the field, it's easy for them to lose touch with what's going on in the business. Meetings, briefings or important company news can be missed, leaving people a step behind.

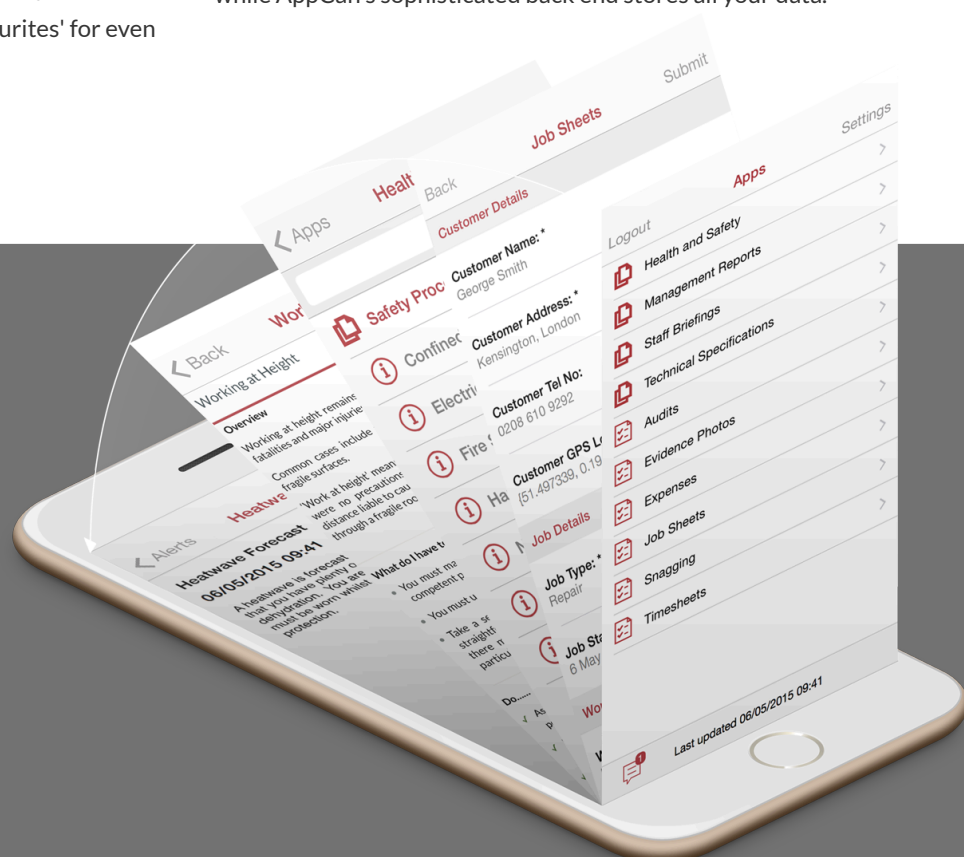

AppCan's Alerts function overcomes this problem, by letting you broadcast messages to selected employees. Far more efficient than text messages or email, even offering a 'read' function, to let you know which of your recipients have seen your message.

### Keep all your information secure

AppCan uses security of the same standard you find on a banking app, with high security encryption on the AppCan backend too. AppCan makes it easy for you to move information between your office and your people in the field, without having to hand over to a third party company.

### Keep your people informed

You can make sure your field agents have access to any documentation or data they need using a clean, simple and intuitive web interface. This makes handling information easy, while AppCan's sophisticated back end stores all your data.

# Everything you need for a fieldwork tool

## 1. CUSTOMISE

AppCan makes it easy for you to build customised mini-apps for distributing documents and collecting data.

## 2. COLLECT DATA

Your field team can then use the mini-apps to collect data, and acknowledge receipt of documents and alerts you send out to them.

## 3. ANALYSE AND REPORT

Once your team submits the data, you can also use AppCan to analyse, print and export it. You can even design form and reports, and store it all in your own cloud database.

## Main Features

### Annual Licences

AppCan's pricing is clear, with nothing hidden. An annual user licences includes everything from hosting and server management to support, upgrades and even an unlimited number of backend users.

### Security

Keep your data safe with 256-bit encryption and SSL authentication (SSL allows sensitive information to be transmitted securely).

### Storage & Accessibility

Every licence includes unlimited data storage, on mirrored servers that are guaranteed to be up 100% of the time. You will never lose any of your data.

### Synchronisation

Content changes within your account are perfectly synchronised, so they'll update any device you use.

### Offline Working

You'll always be able to work with AppCan in the field, even with limited connectivity - AppCan catches up as soon as connectivity becomes available.

### Data Assurance

Independent server time stamps will let you and your users know when records were modified and submitted.

### Personalised

You can tailor the appearance of AppCan, so it looks the same on every device you use.

### Branding

Add your company logo to the login screens (on both web and device versions).

### Free Updates

You'll receive updates and functionality upgrades for AppCan at no extra cost.
